

Non-Ruminant Origin Blood Products Not Intended for Human or Animal Consumption

(Whole blood, serum, plasma, other components of blood such as albumin and globulin, and their derivatives.)

**Non-ruminant origin blood products not for consumption are now exempt from the Korean BSE ban when certified with special certifications.

Required certifications include that the materials:

- 1) Were derived from a species other than ruminant (certification should specify the species of origin); and
- 2) Have been processed, stored, and transported in such a manner as to prevent contamination by communicable animal disease pathogens including BSE.

Other certification requirements have not been determined, but should not make any other references to BSE.
